

BACKUP & DATA RECOVERY

Your Business Runs on Data you likely couldn't operate even a day without it. So, how do you ensure you can always access and use it?

Why It Matters:

An IT disaster can strike at any time, so preparation is key. An effective backup and recovery solution is critical to protect your data and ensure business continuity. Our Backup & Recovery is business class protection of your servers and workstations, fully integrated with our Complete Managed Services.

- **FAST BACKUP** - Take advantage of our True Delta technology, which backs up changes rather than full files. This helps to reduce the time it takes to run the backup process, allowing you to back up more frequently.
- **FAST RECOVERY** - Whether you need to recover a physical server, a virtual server, or a workstation get rapid recovery after a disaster using our hybrid cloud architecture that restores from either cloud-based or local copies, whichever is faster.
- **FULL SYSTEM PROTECTION** - Recover an entire image with a local copy of data or restore directly from the cloud with automatically backed up OS boot up environment, system state, applications, and data.
- **DATA ARCHIVING** - Choose how long you want to retain backup copies, allowing you to keep specific datasets and backups indefinitely. This is particularly helpful for regulatory requirements like HIPAA.
- **ULTRA-SECURE** - Leverage AES 128, AES 256, or 448-bit Blowfish encryption to help with keeping data safe on-premises, during transfers, and in the cloud.
- **PRIVATE KEYS** - Rest easy knowing your data can be accessed only by someone holding a private key.
- **SECURE DATA CENTERS** - Store your data in one of our global data centers, each of which are SSAE-compliant or ISO-certified.
- **VIRTUAL MACHINE SUPPORT** - Back up your virtual environments with host-level VMware and Hyper-V backups. You can restore to an existing or alternate virtual environment.
- **BARE METAL RECOVERY** - Restore to a bare metal state using nothing more than a bootable USB drive or CD-ROM. Bare-Metal Recovery allows you to recover a device's full system state - not only data, but also the operating system.
